raylib ARCHITECTURE 6.0

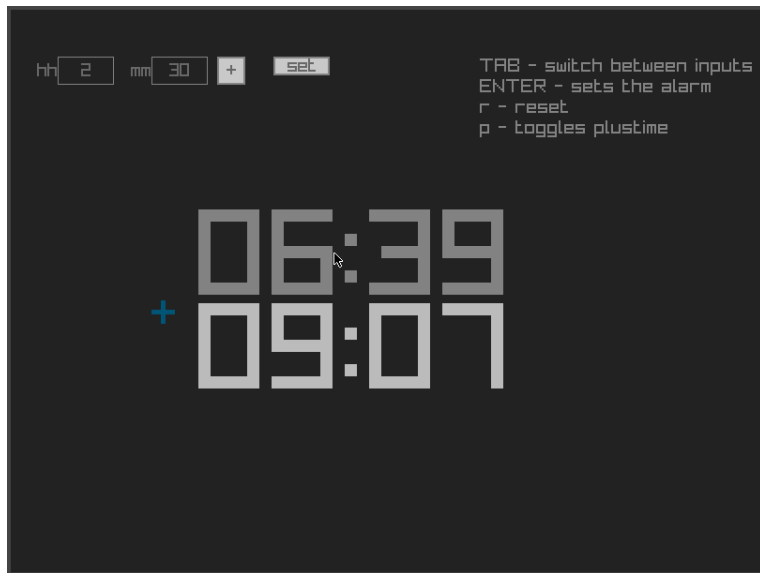

A simple and easy-to-use library
to enjoy videogames programming

raylib

build your game|engine|tool|web|dashboard here!

rayalarm

Um retângulo:

```
Vector2 posicao = {  
    .x = 10,  
    .y = 20,  
};
```

```
Rectangle exemplo = {  
    .x = posicao.x,  
    .y = posicao.y,  
    .width = 100,  
    .height = 200,  
};
```

```
DrawRectangleRec(exemplo, BLUE);
```

A história toda:

```
#include "raylib.h"

int main (){

    InitWindow(800, 600, "rect");
    SetTargetFPS(60);

    while(!WindowShouldClose()){
        BeginDrawing();

        Vector2 posicao = {
            .x = 10,
            .y = 20,
        };

        Rectangle exemplo = {
            .x = posicao.x,
            .y = posicao.y,
            .width = 100,
            .height = 200,
        };

        DrawRectangleRec(exemplo, BLUE);

        EndDrawing();
    }

    CloseWindow();
}
```

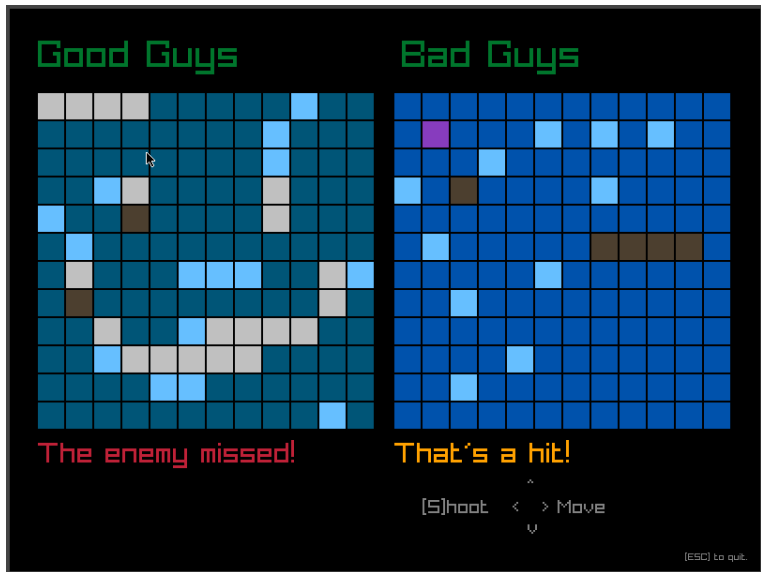

E o resultado:

Extrapolando o conceito:

Tudo de novo igual, só que diferente:
